

GEOsuite CALC

- Online geodetic calculator that will perform all common geodetic computations associated with the main categories of coordinate operations of type conversion and transformation.
- Easy selection of the Source and Target CRS and the operation method between.
- All parameter values provided by API calls to GeoRepository
- Perform classical forward and reverse computations
- Compute all projection information, grid convergence, point and line scale factors
- Link to GeoRepository to display all parameters and parameter values associated with the computation
- Apply formatting to angular and linear coordinate values for source and target.
